

Regular-entry prose pilot 03

Assembly-only pilot for revised compact regular-entry commentary in a more direct factual style. Trace rendering is reused, and the commentary is supplied from a separate book-prose layer.

bake — OE bacan

Derivation: **bákanq* > *bacan* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		Anglo Frisian Brightening	<i>*bækanq</i>
[no change]		OE A Restoration	<i>*bakanq</i>
Northwest Germanic		OE Heavy Syllable Nasal Apocope	<i>*bakan</i>
[no change]		OE Secondary Nasalization	<i>*bakqn</i>
		OE Weak Tail Reduction	<i>*bakan</i>

Orel reconstructs **bakanan*, and Campbell cites *bacan* as a standard example of A-restoration (Orel 2003; Campbell 1959, 61; Ringe and Taylor 2014, 270). Bosworth-Toller and Clark Hall record *bacan* as the Old English infinitive (Bosworth and Toller 1898, 72; Clark Hall 1960, 19). The selected input **bákanq* represents the same weak verb in the accent notation used here. From **bákanq*, Anglo-Frisian brightening first gives **bækanq*. A-restoration before single *k* returns the stem vowel to *a*, and later weak-tail reductions yield *bacan*.

beech — OE bōc

Derivation: **bōkō* > *bōc* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE High Vowel Apocope	<i>*bōk</i>
[no change]			
Northwest Germanic			
NWGmc Final Long O Raising	<i>*bōku</i>		

Kroonen gives **bōk(j)ō-* with Old English *boc* and oblique *bēce* (Kroonen 2013, 81). The selected input **bōkō* is the nominative-singular shape of that family. The selected form here is nominative *bōc*; *bēce* belongs to the same paradigm but is not the citation form used for this derivation. From **bōkō*, final long *ō* raises in Northwest Germanic, and high-vowel apocope yields *bōc*.

bier — OE bæ̃r

Derivation: **bérō* > *bæ̃r* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE High Vowel Apocope	<i>*bæ̃r</i>
[no change]			
Northwest Germanic			
NWGmc Final Long O Raising	<i>*béru</i>		
NWGmc Long E Lowering	<i>*bæ̃ru</i>		

Kroonen reconstructs **bērō-* and cites Old English *bar*, *bær* among the reflexes (Kroonen 2013, 717; Clark Hall 1960, 32; Bosworth and Toller 1898, 73). The selected input **bérō* is the same noun in the accent notation used here. Clark Hall and Bosworth-Toller give *bær*, and Kroonen also records *bar*. The normalized form *bæ̃r* marks the long vowel explicitly. From **bérō*, final long *ō* raises, long *ē* lowers to *æ̃*, and apocope yields *bæ̃r*.

both — OE bū

Derivation: **bō* > *bū* (regular).

Earlier Germanic changes	Old English changes
West Germanic [no change]	[no change]
Northwest Germanic NWGmc Stressed Monosyllable O Raising <i>*bū</i>	

Kroonen treats the numeral under **ba-* and includes the inherited **bō* beside the extended dual forms (Kroonen 2013, 47). Brunner, Campbell, and Fulk preserve the Old English dual paradigm with masculine *bēgen*, feminine *bā*, and neuter *bū* (Sievers 1965, 324; Campbell 1959, 295; Fulk 2018, 223). The selected form is neuter *bū*. Campbell and Brunner treat stressed monosyllabic *ō* > *ū* as a regular development in forms of this type, and *bū* belongs to that set (Campbell 1959, 122; Sievers 1965, 69).

Comparison note. Orel cites an older **bō-j-* explanation for *bēgen*, while Fulk reports Seebold's preference for **bō-p-* (Orel 2003, 45; Fulk 2018, 223). Those analyses concern *bēgen* and the related extended forms. The derivation here is the neuter **bō* > *bū*.

bow — OE bīegan

Derivation: **bāugijanq* > *bīegan* (regular).

Earlier Germanic changes	Old English changes
West Germanic [no change]	OE Au Fronting <i>*bāeugijanq</i>
Northwest Germanic [no change]	OE Diphthong Leveling <i>*bēagijanq</i>
	OE Heavy Syllable Nasal Apocope <i>*bēagijan</i>
	OE Secondary Nasalization <i>*bēagijān</i>
	Sievers Law Syncope <i>*bēagjān</i>
	OE Velar Palatalization <i>*bēadgjān</i>
	OE I Umlaut <i>*bīedgjān</i>
	OE Weak Tail Reduction <i>*bīedgjan</i>
	OE J Loss After Heavy <i>*bīedgan</i>

Kroonen reconstructs the weak causative **baugjan-*, and Ringe and Taylor give the fuller development to West Saxon *biegan* (Kroonen 2013, 75; Ringe and Taylor 2014, 94). The verb belongs to the weak causative member of the bend-family. Clark Hall and Bosworth-Toller record the Old English weak verb (Clark Hall 1960, 34; Bosworth and Toller 1898, 102). The spelling *bīegan* used here normalizes that attested form. From pre-Old-English **bēagjan*, palatalization of *gj* and i-mutation yield the West Saxon infinitive.

fare — OE faran

Derivation: **fāranq* > *faran* (regular).

Earlier Germanic changes	Old English changes
West Germanic [no change]	Anglo Frisian Brightening <i>*færanq</i>
Northwest Germanic [no change]	OE A Restoration <i>*faranq</i>
	OE Heavy Syllable Nasal Apocope <i>*faran</i>
	OE Secondary Nasalization <i>*farān</i>
	OE Weak Tail Reduction <i>*faran</i>

Kroonen gives the inherited strong verb as **faran-*, and Orel gives the same lexeme as **faranan*, both with Old English *faran* among the reflexes (Kroonen 2013, 149; Orel 2003, 132; Campbell 1959, 61). Clark Hall and Bosworth-Toller distinguish strong *faran* from weak *færan*, while forms such as *fære* and *færð* belong to the present tense (Clark Hall 1960, 113; Bosworth and Toller 1898, 250). From **fāranq*, brightening first gives **færanq*; A-restoration before single *r* returns **faranq*, and later reductions yield *faran*.

guest — OE *ġiest*

Derivation: **ġástiz* > *ġiest* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		Anglo Frisian Brightening	<i>*ġæsti</i>
[no change]	Northwest Germanic	OE Velar Palatalization	<i>*ġæsti</i>
		OE I Umlaut	<i>*ġesti</i>
		OE Ws Palatal Diphthongization	<i>*ġiesti</i>
PGmc Final Z Deletion	<i>*ġásti</i>	OE High Vowel Apocope	<i>*ġiest</i>

Campbell and Ringe and Taylor treat this as an ordinary i-stem whose West Saxon development yields *ġiest*, while non-West-Saxon evidence preserves forms of the *ġest* type (Campbell 1959, 91; Ringe and Taylor 2014, 296). Bosworth-Toller and Clark Hall record spellings such as *ġist*, *ġest*, *ġiest*, and *ġyst* (Bosworth and Toller 1898, 387; Clark Hall 1960, 149). The derivation is regular: brightening and i-mutation reshape the stem, and West Saxon palatal diphthongization gives *ie*.

Dialect note. Anglian *ġest* is genuine Old English evidence alongside West Saxon *ġiest* (Ringe and Taylor 2014, 296; Bosworth and Toller 1898, 387).

learn — OE *liornian*

Derivation: **líznoġanq* > *liornian* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE Breaking	<i>*líornōġanq</i>
[no change]	Northwest Germanic	OE Heavy Syllable Nasal Apocope	<i>*líornōġan</i>
		OE Secondary Nasalization	<i>*líornōġn</i>
		OE I Umlaut	<i>*líorneġn</i>
[no change]		OE Unstressed Long Vowel Shortening	<i>*líorneġn</i>
		OE Weak Tail Reduction	<i>*líorneġan</i>
		OE Intervocalic J Vocalization	<i>*líorneian</i>
		OE Unstressed EI Contraction	<i>*líornian</i>

Ringe and Taylor place the verb in a class-II weak family of the **lízno-* type, and Kroonen keeps the same comparative base (Ringe and Taylor 2014, 318; Kroonen 2013, 328). Campbell records Northumbrian *liornian* and treats the *eo* of *leornian* as secondary (Campbell 1959, 123; 1959, 296). The Northumbrian spelling preserves *io* where original *eo* and *io* remain distinct. The selected target *liornian* therefore represents the Northumbrian regular form.

Dialect note. Clark Hall and Bright give *leornian* as the usual headword (Clark Hall 1960, 193; Bright 1971, 58). From **líznoġanq*, the regular development yields *liornian*; *leornian* reflects the later *eo* development.

linden — OE *lind*

Derivation: **lindō* > *lind* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE High Vowel Apocope	<i>*lind</i>
[no change]	Northwest Germanic		
		NWGmc Final Long O Raising	<i>*lindu</i>

Kroonen reconstructs **lindō-*, and Clark Hall and Bosworth-Toller record Old English *lind* ‘linden, lime-tree’ (Kroonen 2013, 337; Clark Hall 1960, 198; Bosworth and Toller 1898, 630). The selected input **lindō* is the citation-form noun used here. Northwest Germanic final *ō* raises to **lindu*, and high-vowel apocope yields *lind*. Clark Hall also gives adjectival *linden* ‘made of linden-wood’; that is a related adjective, not the noun treated here (Clark Hall 1960, 198).

mother — OE *mōder*

Derivation: **mōdēr* > *mōder* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE Unstressed Long Vowel	<i>*mōdær</i>
[no change]		Shortening	
Northwest Germanic		OE Unstressed AE Merger	<i>*mōder</i>
NWGmc Long E Lowering	<i>*mōdǣr</i>		

Kroonen and Orel cite the Proto-Germanic r-stem as **mōdēr-* or **mōdēr* (Kroonen 2013, 368; Orel 2003, 274). Clark Hall, Campbell, and Ringe and Taylor preserve the Old English headword tradition *mōdor* / *modor* with oblique *mēder* in the paradigm (Clark Hall 1960, 219; Campbell 1959, 598; Ringe and Taylor 2014, 312). The selected form here is nominative *mōder*. From **mōdēr*, regular suffixal development yields that form.

Comparison note. *Mōdor* is the usual dictionary form and reflects later levelling within the r-stem paradigm. *Mēder* preserves the oblique line.

show — OE *scēawian*

Derivation: **skāwōjaną* > *scēawian* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE Aw Long Diphthong	<i>*skēawōjaną</i>
[no change]		OE Heavy Syllable Nasal Apocope	<i>*skēawōjan</i>
Northwest Germanic		OE Secondary Nasalization	<i>*skēawōjan</i>
[no change]		OE Sk Palatalization	<i>*jēawōjan</i>
		OE I Umlaut	<i>*jēawējan</i>
		OE Unstressed Long Vowel Shortening	<i>*jēawējan</i>
		OE Weak Tail Reduction	<i>*jēawējan</i>
		OE Intervocalic J Vocalization	<i>*jēaweian</i>
		OE Unstressed EI Contraction	<i>*jēawian</i>

Orel and Kroonen place the verb in the ordinary class-II show-family, and Brunner records Old English *scēawian*, *scāwian* (Orel 2003, 339; Kroonen 2013, 482; Sievers 1965, 148). From **skāwōjaną*, *aw* before a following vowel yields Old English *ēaw*, while the class-II suffix preserves *ō* between *w* and *j*. The result is *scēawian* (Campbell 1959, 138; Orel 2003, 339).

Form note. The spelling *scēawian* normalizes initial in dictionary *scēawian* (Campbell 1959, 19; Hogg 1992, 236).

weapon — OE *wāpn*

Derivation: **wēpną* > *wāpn* (regular).

Earlier Germanic changes		Old English changes	
West Germanic		OE Heavy Syllable Nasal Apocope	<i>*wāpn</i>
[no change]			
Northwest Germanic			
NWGmc Long E Lowering	<i>*wāpną</i>		

Kroonen reconstructs a double-stem noun **wēbna-* ~ *wēpna-* and cites Old English *wāpn* among the reflexes (Kroonen 2013, 617; Campbell 1959, 150; 1959, 226). Campbell preserves unbroken *wēpn* beside broken *wēpen*-type forms. Bright contrasts broken *wāpen/wapen* with unbroken *wāpnēs*, and Clark Hall lemmatizes the noun under *wapen* while preserving unbroken forms elsewhere (Bright 1971, 29; Clark Hall 1960, 355). The selected form *wāpn* represents the unbroken line from **wēpną*.

Form note. *Wæpen* is the usual late West Saxon simplex headword, while *wæpnes* and related forms preserve the unbroken cluster (Campbell 1959, 150; 1959, 226; Bright 1971, 29; Clark Hall 1960, 355).
